

## LED-CAVITY ENHANCED ABSORPTION SPECTROSCOPY FOR SENSING THE ATMOSPHERE

HONGMING YI, *Physical Measurement Lab, National Institute of Standards and Technology, Gaithersburg, MD, USA*; TAO WU, *Physics, Nanchang Hangkong University, Nanchang, China*; EIRC FERTEIN, CÉCILE COEUR, *Laboratoire de Physico-Chimie de l'Atmosphère, Université du Littoral Côte d'Opale, Dunkerque, France*; WEIXIONG ZHAO, GUISHI WANG, XIAOMING GAO, WEIJUN ZHANG, *LAPC, AIOFM, Hefei, China*; WEIDONG CHEN, *Laboratoire de Physico-Chimie de l'Atmosphère, Université du Littoral Côte d'Opale, Dunkerque, France*.

We present our recent progress in the development and applications of cavity enhanced absorption spectroscopy technique based on light emitting diode (LED) for optical monitoring of chemically reactive atmospheric species (HONO, NO<sub>3</sub>, NO<sub>2</sub>) in intensive campaigns and in smog chamber studies.
