

## CONTRIBUTORS

CHARLES DAVIS is Professor of Library and Information Science at the University of Illinois at Urbana-Champaign, where he was also dean from 1979 to 1986. Before coming to Illinois, he was Professor and Dean of the Faculty of Library Science at the University of Alberta in Edmonton, Canada; he has also taught at the University of Michigan and Drexel University. A chemist as well as an information scientist and librarian, Dr. Davis worked as an index editor for the Chemical Abstracts Service before entering academic life. He is the principal author of several books, including *Guide to Information Science and Pascal Programming in Libraries*. His research interests include computer-based retrieval techniques and interface design. He currently enjoys an appointment as Visiting Scholar at Indiana University in Bloomington, Indiana, where he resides with his wife, her dog and his cat.

JOYCE N. DAVIS is Associate Librarian for Administration at Hollins College. She holds an MLS degree from the University of North Carolina at Chapel Hill. She has held a variety of positions in public and academic libraries and served as Marketing and Customer Support Manager for a vendor of automated library systems. She has participated in the planning and installation of automated systems in four libraries and is currently beginning the same process for the fifth time.

SIDNEY W. KITCHEL is Manager of Database Development with Data-Parallel Systems, Inc. (DPSI). He holds a B.S. in Mathematics and a B.A. in History from the University of Oklahoma. Indiana University awarded him an M.A. in History and Philosophy of Science and an M.S. in Computer Science. At DPSI, he is a principal designer of the Hyper-Index, a relational database accelerator that will run on massively parallel supercomputers. Before joining DPSI, he was one of the developers of DOME, an object-oriented database system. In the dim past, he was an online cataloger with the Indiana Online Union List of Serials Project and enjoyed exercising his CONSER powers.

THOMAS R. KOCHTANEK is Chair of the Department of Information Science, School of Library and Information Science at

the University of Missouri-Columbia. He holds a B.S. in Operations Research and a Ph.D. in Library and Information Science, both from Case Western Reserve University. He also has a post doctorate in Medical Informatics from the University of Missouri-Columbia. His fields of interest include information storage and retrieval, intelligent database design, and library automation.

VICTOR ROSENBERG is Associate Professor of Information and Library Studies at the University of Michigan and President of Personal Bibliographic Software, Inc. Before coming to Michigan, he was a Professor of Library Science at the University of California at Berkeley. Dr. Rosenberg received his Ph.D. from the University of Chicago and his Master's degree from Lehigh University.

DEBORA SHAW is Associate Professor at the Indiana University School of Library and Information Science. She taught for several years at the University of Illinois, and before that was Head of Data Services at the Indiana State Library. Dr. Shaw's research interests include human/computer interaction in information retrieval systems and the design of computer databases and systems to promote their effective use. She is currently working on a study of humanities scholars' use of automated library services. She has published several articles in scholarly journals, and is co-author of *Pascal Programming for Libraries*, published in 1988.

## INDEX

*Prepared by: Debora Shaw*
