

LIBRARY APPLICATIONS OF DATA
PROCESSING: AN ENUMERATIVE BIBLIOGRAPHY, 1964-65

Compiled by James Krikelas

The purpose of this bibliography, prepared for the participants of the 1966 Clinic, is to provide a convenient list of references to actual applications of data processing machines for the mechanization of library routines. Items published in 1964 that were included in a similar list distributed in 1965 have been excluded.* In addition to Library Literature and Library Science Abstracts, a new quarterly, Documentation Abstracts (which includes the former "Literature Notes" section of American Documentation), should be useful for current references. For retrospective citations to operational systems the references cited below may be useful. (It should be noted that the scope of each is not identical and some duplication has occurred.)
