CIRCULAR NO. 60

UNIVERSITY OF ILLINOIS
Agricultural Experiment Station.

URBANA, OCTOBER 1, 1902.

My Dear Sir:

Kindly permit me at this late date to thank you for replying to the 100 questions sent you concerning "Present Methods of Beef Production." A large number of replies have been sent in, but we are anxious to get many more before completing the tabulation of the answers already at hand.

As you doubtless know the compiling of this vast amount of information will take months of careful work. If possible, a bulletin containing the results of this investigation in which you have taken such a kindly interest will be published next spring or early summer.

We trust the enclosed bulletins recently published by the author will be found helpful.

Very truly yours,

Herbert W. Mumford,
Professor of Animal Husbandry.
