for low-priced books, side by side but not in
competition with the existing market for higher-priced books. They conclude that people
will buy books that interest them, without
too much regard for price (does this account
for the $10 price set on their own volume!).

The authors recommend that studies of
this kind be repeated at intervals of a year
or two. Librarians will agree that no one survey in this field can be regarded as definitive. Indeed, so fast have world events moved, that the data for this study, collected between May 21 and June 8, 1945, were obsolete before publication. They were gath-
ered in the closing moments of the pre-atomic age, just after V-E Day, but before the bomb fell on Hiroshima. Moreover, they were ob-
tained while millions of American men whose
reading interests and habits are known to have been materially affected by their military ex-
perience were still overseas. Although some
adjustment was made in the sampling quotas,
no attempt was made to secure data from this
large and influential group of readers. Nor
is any reference made in the interpretation of
the findings to relevant information about
American service men gathered by others.

Compared with such studies as Wilson’s
Geography of Reading, Waples’ People and
Print, and Waples and Tyler’s What People
Want to Read About, the present survey can-
not but appear superficial, especially with
respect to interpretation of findings. The
authors seem unaware that other studies of
“people and books” have been conducted by
highly competent investigators. They make
no effort to relate their findings to those ob-
tained in other surveys. In fact, they make
no reference whatever to any of the literature
in this field. The book is attractively printed
and bound but contains neither bibliography
nor index.—Alice I. Bryan.

Little Magazines

The Little Magazine: A History and a Bibli-
ography. By Frederick J. Hoffman,
Charles Allen, and Carolyn F. Ulrich.
Princeton, Princeton University Press,
1946. ix, 440p.

Presumably, there could be no little maga-
zines until first there were big ones. The
authors of this book point out that the little
magazine movement (if it may be called that)
began about 1910. Its beginnings, then, coin-
cide with the end of the muckraking era,
which, if it did nothing else, established the
permanent place in America of the popular,
large-circulation magazine; the number of
readers of Munsey’s, McClure’s, Everybody’s
increased by the hundreds of thousands under
the pressure of new journalistic techniques,
but when muckraking died the tremendous
circulations remained and presently grew even
larger. It seems more than a coincidence that
in the second decade of the twentieth century
the little magazine began to feed on a vigor-
ous and sometimes ostentatious opposition to
bigness.

Of this relationship, Hoffman-Allen-Ulrich
make nothing at all. Instead, they point out
a very creditable relationship to the later
history of publishing; 80 per cent of the au-
thors of literary worth in our time, they say,
were first published in the little magazines.
It is only fair to add, however, that they de-
fine “little” as something more than a matter
of size. True, the little magazine lived a
precarious, hand-to-mouth existence. Often
its only subscribers were its contributors (par-
ticularly if you include “would-be” contribu-
tors). Sometimes it died a thousand deaths
before its final collapse. And collapse, of
course, it always did in the end, for if it lived
on it was no longer to be considered a little
magazine. But they make the further distinc-
tion that the little magazine published experi-
mental writing and went in for the latest
literary thing. Like a number of the editors
they are writing about, they are inclined to
prefer the term “advance guard” to “little.”
The distinction is useful though it may be
argued.

In the history which makes up a good half
of the volume, little magazines are divided
into six classes—poetry, leftist, regional, ex-
perimental, critical, and eclectic. Chapters
on each type are interspersed with chapters
on the historical development of the genre.
Some of the magazines to receive extended
treatment are The Double Dealer, The Little
Review, Poetry, The Seven Arts, Broom.
The Partisan Review is presented as a little

OCTOBER, 1946

Interesting as many of the details are in this section, its ineffective organization and incompleteness make it less important (and useful to librarians) than the latter half of the book, which is given over to a two-part bibliography—the much larger first part to little magazines, the second to the fellow travelers of little magazines—and a first-rate index. Reading the history section, for instance, leaves one quite unprepared to discover that of the 540 little magazines listed in the first bibliography, 134 were published outside the United States—in such countries as England, France, Mexico, Australia, Ireland, Germany, Denmark, and Russia. (An even larger percentage of the fellow travelers are foreign, 43 out of a total of 96.)

The significance of the geographical spread of the little magazine becomes clearer when one examines the informative bibliographical notes under particular entries. Clearly one of the most important results of the little magazine—and in some instances it was an avowed purpose—was cultural interchange between the nations. Translations and critical estimates of foreign authors have been a frequent feature of the little magazine at all times in the last thirty-five years. Interestingly enough, the authors list the publication date of the first modern little magazine as 1891. They might well have made something of the fact that this was the year in which Congress passed the International Copyright Bill. For the act gave American literature a chance to come of age in relation to other literatures; American writers were freed from the frequent practice of foreign pirating and from the unfair competition that existed when foreign fiction and magazine articles could be republished here without the consent of the authors. The little magazine, more than any other part of the publishing industry, seems to have taken advantage of the opportunity. Be that as it may, cultural and literary interchange with other countries has been as much a mark of the little magazine as the publication of experimental writing.

Digging out the elusive facts about brief, fly-by-night journals published over half the world is not the easiest of tasks, and it was a foregone conclusion that a number would be missed. Yet I am sure of only one omission—The Wastebasket published in the Middle West (at St. Paul?) about the end of World War I. For the care of detail and intensive labor lavished on their bibliography, the authors (and presumably Miss Ulrich in particular) are to be congratulated. For the literary researcher and the librarian they have provided a wealth of material which should be useful for some time to come.—Paul Bixler.

Books and Libraries in Wartime

In the spring of 1944 ten lectures were delivered under the auspices of the Graduate Library School, University of Chicago, to describe the impact of war on libraries, books, the press, radio, and motion pictures. The volume under review, published a year and a half after the event, contains eight of the lectures, well-edited by Professor Butler. It is unfortunate that they did not appear in print earlier. Timeliness is of minor importance in presenting results of systematic research, but a collection of essays on current trends and events loses much of its value by delay in publication. The fact that some of the contributors did pay attention to postwar problems, however, renders publication at so late a date somewhat more justifiable.

To university and research librarians, the contributions by MacLeish, Beals, and Butler will be of greatest interest. MacLeish’s statesmanlike address shows how vital research libraries are to the security of a free nation. Library materials should not serve any particular group but the entire generation of living men. Such an ideal is to be
