Rare Book Cataloging

It will be a surprise to many a reader to learn that a cataloger from the Folger Shakespeare Library has succeeded in describing in simple, layman's English the intricacies that are the foundations of rare book cataloging. In a mere 85 pages he has lifted the iron curtain behind which most catalogers of ordinary books (as he calls them) have been too timid to look.

There is a serious danger, however, that catalogers and library administrators may be misled by this simplicity and assume that the task is as simple as this explanation of it. The critical reader will soon discover that in spite of the opening chapter entitled "Whys and Wherefores," there are many questions left unanswered. In his first paragraph, Mr. Dunkin says that "catalogers dream of a brave new world in which simplified cataloging will answer all needs of all books." He then promptly explains that what he has suggested in the following pages for rare book description is really simplified cataloging and he falls into his own trap. His dreams of simplified descriptions for rare books should answer the needs of all rare books. His basic fallacy as I see it is his failure to attempt to define a rare book which he says is not the cataloger's job. Even if one accepts his premise that "any book which has value as a physical object is a rare book," it is possible to concede this in a day of good photoduplication services one must admit that different physical qualities may have caused the rarity, and correspondingly different descriptions may be required to catalog such books adequately without giving unnecessary information. To suggest that if the convention of quasi-facsimile transcription of title pages is not adopted, the transcription must give line endings in every case ("The general cataloger . . . will do well to mark line endings in all transcriptions because it is so little trouble that omitting them results in no saving") is to provide guidance to be followed without the discriminating mind that it is necessary for a cataloger of rare books to have.

Intelligent cataloging requires that the cataloger see the relationships between books. The cataloger of rare books in many cases must make finer distinctions in the relationships and be able to express clearly and concisely what he has discovered. This brief treatise may be a godsend to guide the beginner in the presentation of his bibliographical data, but it needs to be supplemented by a guide that leads the cataloger to the sources of information that tell him why his particular book is rare.—Lucile M. Morsch, Library of Congress.

ILO Publications

This volume, issued as Bibliographical Contributions No.5, is the first attempt at a complete listing of the English language publications of the International Labour Office. Two years ago a corresponding catalog was issued for French language publications (Bibliographical Contributions No.1) and a supplement for 1949 publications followed. Since the French catalog is out of print, the librarian, Joseph Wilson Haden, has announced that the library is preparing a new edition covering the period 1919-1950, which they hope to bring out later this year as No. 6 of the series.

The Catalogue of Publications in English is arranged in two parts: The first part is a dictionary catalog with full bibliographic information for each entry; the second part is a checklist arranged by conference, committee or other body, and by series. The latter should be exceedingly useful for libraries in checking their holdings and in identifying the somewhat complex publications of international labour conferences. For prices of ILO documents reference must be made to the Abridged Catalogue of Publications which is frequently revised.
The Catalogue represents the careful bibliographic work that has been typical of the ILO Library staff. The technical work was done by Mariliese Muller under the direct supervision of Janet F. Saunders.

As with most catalogs, the user wishes for more subject entries. For example, the volume would have been of greater use in locating reports on working conditions in specific countries if such titles as *Industrial Labour in India* had been entered under *India* as well as under *Labour—India*. This, of course, would have added considerable work and pages.

The usefulness of this catalog to those working in the field of industrial relations suggests the need for a similar catalog of the publications of the United States Department of Labor or at least of its chief publishing agency, the Bureau of Labor Statistics. The last subject index to the publications of the bureau was issued in 1915.

Two other publications in the ILO Bibliographical Contributions are: *Catalogue of Russian Periodicals in the International Labour Office Library* (No.2) and *List of Periodicals Indexed in the Library of the International Labour Office During 1950* (No.3). In preparation are: *A Catalogue of the Library of the International Management Institute* (No.4) and a Bibliography on the International Labour Organization (No.7). Both will be issued with French and English texts.—Ralph E. McCoy, Institute of Labor and Industrial Relations, University of Illinois.

**India and Libraries**

Dr. Ranganathan introduces the *Library Catalogue* with the statement that it is "primarily a book in practical cataloguing." It is not a book of rules, and is not concerned with theory or the routine involved in cataloging books in a library.

Based on the premise that "cataloguing is, from the point of view of teaching, a subject in which the practical performance must be the hub from which everything else should radiate and indeed should get irradiated," Dr. Ranganathan has prepared a textbook which is characterized by many exercises and examples.

Of special interest in this volume is Chapter 84, "Perspective of the Past and the Prospect of the Future." Dr. Ranganathan comments upon the pre-Cutter period, the efforts of Cutter to systemize the subject approach to books, and the failure of librarians to take full advantage of the values of classification. He criticizes sharply the dictionary catalog and the blind acceptance of this type of arrangement. Since the libraries of India are just establishing catalogs, he suggests that they take cognizance of this situation. "A great responsibility is laid upon Indian libraries to make full use of the fact that they are at present on virgin soil, that it is there that new techniques can be forged and that indeed the laboratory has shifted to India. Let it not be said that her sons in the library missed the golden opportunity and were inert and imitating when they should have been active and creating."

*Library Tour 1948* is a narrative of Dr. Ranganathan's visit to Europe and America. It consists of a series of comments on various subjects, such as national central libraries, city library systems, rural library systems, university libraries, business libraries, ad hoc bodies, and the library profession. Consideration is given to the differences which exist in
