for the abolition of the library in favor of subject-specific information services, he does a toe dance, points out that most of public knowledge would not be useful even if available, notes that the vast majority of information gathering is done for interest rather than for problem-solving purposes, and finally suggests that the only thing we need do to make our present system of information dissemination perfect is to increase our reference staff so that there is a subject expert assigned to each and every subject in which we intend to offer information service. By my reckoning that means most general libraries would have to have several hundred experts, a rather massive increase in "reference librarians." I wonder if Wilson wrote this book while trying to figure out how to find jobs for all the library school students he was helping to train.—W. David Laird, University Librarian, University of Arizona.

Both these AECT books assume a learning resources complex administratively and physically separate from the library (Merrill and Drob, p.17, College Learning Resources Programs, p.71).

Merrill and Drob’s volume, of which a 1974 version was published under the title Criteria for Planning the University Learning Resources Center (p.ii), is based on a 1969 study of nine campuses of the University of California, ranging in size from 1,000 to 27,500 students. The data gathered were projected to produce a matrix of 288 cells displayed in 17 pages of tables. "The datum entered for each cell is an estimate based on expert judgment. A tentative estimate was prepared for each cell.

... Learning resources personnel on the other campuses then reviewed the estimates on the basis of their experiences in their settings” (p.55).

The tables give recommended full-time-equivalent staff and assignable square feet of space for four levels of enrollment and four levels of scope or range of activities offered within each type of service. These are based on an overall estimate of 10 percent of “total student learning time during which the student is under the stimulus of learning resources” (p.54) for television production services, photography production services, graphic services, programmed instruction, television presentation services, self-instructional units, projection, audio, and film rental services, instructional development service, and internal planning and administration.

Although every reader may have some difference of opinion about what activity is assigned to what level of scope, the tables provide a useful checklist from which experienced administrators might derive their own priorities and, given an understanding of the limitations of the data presented, work out their own patterns and formulas. The text chapters appear to have been written in 1972, with very minor revisions that do not reflect the changes of the last five years or the current status and experience with implementation.

These chapters discuss the pre-1972 development of instructional resources, their relationship to teaching styles, centralization vs. decentralization, the nonrelationship of learning resources to libraries and librarians, instructional development, administration, evaluation and accountability, and budgeting.

College Learning Resources Programs: A Book of Readings consists of eight chapters by twelve authors, which appear to have been written between 1971 and 1974. Treatment of each topic is brief and the balance somewhat uneven.

"Technological Communications Services in Higher Education," including instructional development, production, and utilization, discusses administrative organization, functions, and personnel with five organizational charts. "Instructional Development Function” discusses levels of personnel, competencies needed for faculty develop-
1976-1977

PICK'S CURRENCY YEARBOOK*

This annual is the most complete single source of current monetary information in print. Contains a comprehensive description and appraisal of 112 major currencies and accessory units, a supplementary review of 40 minor monies, and latest developments in international gold markets including monthly bar and coin prices for ten years. There is also a complete survey of official exchange rate structures as well as a ten-year record of monetary depreciation. Resident and nonresident transferability regulations and domestic currency restrictions are discussed.

PRICE... $150.00

*1955-1974 (19 volumes) available on microfilm (16mm, 20.1 reduction-positive image). Postpaid price: $350.00

ALL THE MONIES OF THE WORLD*

A Chronicle of Currency Values

Historical dictionary of money values. Fulfills the need for a standard reference work for students and professionals alike. Recommended by Library Journal for business, financial and economics libraries. The volume is a complete chronology of kinds and values of currencies used since man's first experience with a medium of exchange.

PRICE... $80.00

*Also available on seven, 105mm x 148mm microfiche cards. Postpaid price: $24.95
