Involvement in Curriculum Change

Catherine E. Pasterczyk

Many sources of information exist for selectors and bibliographers in academic libraries to learn about curriculum change. A survey of the heads of collection development in 104 ARL libraries was conducted to determine the usefulness of these sources and the extent of library involvement in planning for curriculum change. Some factors having an influence on this involvement, such as library representation on curriculum committees and informal contacts with faculty, are examined in detail. The role of the General Library in the establishment of new courses and programs at the University of New Mexico is discussed, as are methods used at other universities.

The mission of a university library to support the teaching, research, and service goals of its parent institution is largely fulfilled through the selection of appropriate library materials. A collection development policy statement (where one exists) serves as an exceedingly useful guide to what the collections are and what they should be. This document, partly because of its mode of production, is always somewhat out-of-date. Selectors must have a means of keeping up with changes in the university that should be reflected in the collections. This study of Association for Research Libraries (ARL) members represents a beginning effort to quantify the extent and nature of ARL selector involvement in planning for curriculum change and to identify methods effective in this process.

The library's responsibility to support the university's teaching functions through appropriate selection of materials is an old and enduring idea. The "Standards for University Libraries" document clearly states, "A university library's collections shall be of sufficient size and scope to support the university's total instructional needs and to facilitate the university's research programs." Quantitative studies to determine if this is actually occurring are rare.

Sources of information mentioned in the literature as being useful for librarians learning about the curriculum include the course catalog, faculty contacts, course syllabi, and the card catalog. The relative usefulness of these and other methods and the extent to which they are used are not discussed. Many authors emphasize informal means for learning of such change. David Kaser mentions that "significant inputs to the library plan are gleaned, almost through an underground intelligence network, from such circumstantial sources as hearsay, as things said rather than unsaid."

Edward Holley

Catherine E. Pasterczyk is science collection development coordinator, General Library, University of New Mexico, Albuquerque, New Mexico 87131. This article is based on a paper presented to the RTSD/RS Chief Collection Development Officers of Medium-Sized Research Libraries Discussion Group at the ALA Midwinter Meeting, Washington, D.C., January 5, 1985.

This research was supported by a grant from the Research Allocations Committee, University of New Mexico. The author would like to thank all the respondents to this survey and two anonymous reviewers for their comments.
freely acknowledges, "despite his protestations that the librarian should be a valued member of every curriculum committee and informed of every move into a new research area . . . he will probably be one of the last to learn of these new developments unless he has informal contacts among the faculty."12 Numerous authors emphasize the need for learning of proposed changes and then planning support for the projected curriculum.13,14,15,16,17

This study seeks to address the following questions: (1) What sources of information are available to selectors/bibliographers for learning of existing and proposed curriculum? (2) How useful is each of these sources? (3) To what extent are librarians learning of proposed curriculum changes before they are implemented? (4) What are the characteristics of techniques used by librarians who always have prior knowledge of proposed curriculum change?

METHODOLOGY

A survey was mailed to the heads of collection development in ARL's 104 member libraries in the United States and Canada. The results reported here (see appendix A) are based on a 77 percent response rate. The data were analyzed using SPSS-X Release 2.0 as implemented on an IBM 3081D. Frequencies and cross-tabulations including chi-square were run on certain variables. In cases where there was a high number of responses in an unanticipated category, such as "academic status" rather than a clear-cut "yes" or "no" for faculty status, another category was formed so as not to create an unintentional bias in the interpretation of the results. Data analyses were performed by both using and not using the other categories. Even though the data were analyzed quantitatively, they should probably be examined qualitatively: the sample size was small, and there was a possibility for varying interpretations of the questions.

RESULTS AND DISCUSSION

Despite the fact that liaison with academic departments is widely viewed as a top priority in collection development activities18 and that a myriad of methods for learning of curriculum changes are poten-

greater awareness, and 2.9 percent said it contributed to less awareness. One respondent remarked, "Faculty status does not assure bibliographer acceptance." In fact, no significant correlation was found between faculty status and whether (1) librarians are aware of curriculum change prior to the fact, (2) librarians have the opportunity to comment officially on how proposed curriculum changes will affect materials selected, or (3) libraries have an up-to-date collection development policy (see table 3). Apparently the methods for improving communication are more subtle than simply possessing faculty status.

One-half (49.3 percent) of the respondents indicated that selectors are not allowed to comment on how proposed course/program changes will affect materials selected. For the remaining half (50.7 percent), the opportunity to comment might occur only occasionally and applied only to program changes. Commentary was made through somewhat informal means or through various Faculty Senate committees. There is almost unanimous

*Current = library has a current (revised within last five years) collection development policy.
Update = collection development policy is updated on a regular basis (at least every five years).
Fac. = library has representation on the university curriculum committee, i.e., committee charged with discussing curriculum concerns such as degree requirements, course changes, etc.
Fac. Stat. = librarians have faculty status.
Prior = selector/bibliographers have knowledge of proposed course changes in their area(s) of responsibility before they are implemented.
Comment = selectors are given an opportunity to officially comment on how proposed course/program changes will affect materials selected.

Figures given show the significance level at which the null hypothesis of independence can be rejected or, in other words, the probability of rejecting the null hypothesis of independence when the null hypothesis is true (Type I error). Statisticians often use $\alpha < .05$ as a cutoff point at which the alternative hypotheses of dependence can safely (i.e., with a probability $\alpha < .05\%$ that a Type I error will occur) be accepted. Values $\alpha > .05$ are generally considered nonsignificant. The table shows values $\alpha > .100$ as being nonsignificant (NS).

agreement that both librarians and the university would benefit from librarians having this opportunity to comment, at least on major changes. There was a positive relationship between librarians having prior awareness of curriculum change and their being allowed to comment officially upon it. This may imply that once an official avenue for comment is put into effect it is easier for selectors to learn of changes, since automatic notification occurs, or that once selectors express an interest in curriculum change, they are more likely to be allowed to comment.

ONE SOLUTION

The procedure developed at the University of New Mexico (UNM) General Library for selector involvement in planning for curriculum change results from the belief that a combination of formal and informal communications between teaching faculty and library faculty is optimal.

Library faculty are voting members of the three standing committees of the Faculty Senate that are concerned with curriculum changes, the Curricula Committee, the Senate Graduate Committee, and the Undergraduate Committee. Additionally, the assistant dean for Collection Development is an ex officio member of the Curricula Committee.

New course requests and major or minor curriculum change requests are first sent to the dean of Library Services for assessment of library impact. These requests are referred to the appropriate selector for comment, which provides selectors with an official notification that a new course is being proposed and the requesting department with an evaluation of anticipated library support. Often, the earlier, informal dialogue between librarians and teaching faculty is the first way librarians learn of new course proposals, and it is not unusual for consultation to take place during the selectors’ evaluation. The new course requests are subsequently forwarded to the Curricula Committee, the college or school dean, and the Office of Graduate Studies. Faculty Senate minutes notify the selector of the requests’ final disposition. It is possible, however, for a course to be offered as a special topic for several years without going through this process. Still, many respondents to the survey mentioned that they would like such a system; only six indicated that they have a comparable system in place.

The desirability of keeping the Library
informed as plans are made for new pro-
grams was discussed by the Library Fac-
tulty Committee as early as the 1930s. 22 The 
present communications system was 
achieved over a period of eight years and 
is based on a "concept of quality" for li-
brary service established partly through 
good selector/departmental liaison com-
munications that helped build credibility 
and partly from the expectation of the li-
brary's high-quality response (within fi-
nancial constraints) to the university's 
needs. The fact that university and state 
policies mandate an examination of the 
budgetary implications of a new course le-
gitimized the impact statements prepared 
by library faculty. It was also argued that 
librarians, because they are faculty, 
should actively participate in planning the 
curriculum change rather than merely re-
acting to it. 23 

Some survey respondents commented 
that individual course changes should not 
affect library materials selection: a well-
developed collection development policy 
would take care of such things, and library 
comment would only be valuable for ma-
jor, i.e., program or degree changes. First, 
the achievement of library integration into 
the curriculum planning process at UNM 
was, of necessity, a gradual one. Library 
impact statements were first required for 
courses and then for programs and de-
grees. Second, the UNM General Library 
does not have a complete, up-to-date col-
lection development policy and every lit-
tle bit of information helps. Kaser noted 
"All librarians . . . serve as unique anten-
nae, through which units of information 
can be received, some of great impor-
tance, some of small importance, but all of 
some importance. A well-run library will 
assure that all such information is fed, on a 
structured basis, into a central intelligence 
system where it can be noted, winnowed, 
evaluated against other input, and acted 
upon as appropriate on a continuing ba-

SOLUTIONS AT OTHER LIBRARIES 

These solutions are not unique to UNM: 
they are also used by the five other li-
braries where librarians "always" have 
knowledge of proposed course changes. 

Many of these libraries are provided a 
space on university curriculum forms for 
selector comment on both graduate and 
undergraduate, new, modified, or deleted 
courses and programs. These forms some-
times include a bibliography of materials 
deemed important by the department. 
Course requests can be held up in commit-
tee for want of a library statement. Exten-
sive resource evaluations are conducted 
by some selectors in the case of proposed 
degree programs. Several librarians men-
tioned that having the head of Collection 
Development or some other selector sit on 
the curriculum committee was very valu-
able. Where this is not feasible, receiving 
the minutes or agenda of the meetings is 
sometimes arranged. Membership on 
other senate committees is useful for some 
libraries. Besides being effective for those 
libraries that use them, the above solu-
tions were frequently mentioned by other 
librarians as being desirable.

CONCLUSIONS 
The problem of facilitating exchange be-
tween teaching faculty and librarians, par-
ticularly regarding curriculum change, is 
an old one, and the fundamental solution, 
informal face-to-face communication, is 
equally old. The present study confirms 
the benefits of this solution and shows 
that it is not used to its fullest potential. 
Selectors, the librarians with the most bib-
liographic knowledge of particular subject 
areas and influence on how collections are 
built, are rarely consulted automatically 
when curriculum changes are proposed. 
A great deal has been written in the last 
few years about faculty status for librari-
s. Its attainment is viewed as a victory 
by librarians and with confusion by some 
teaching faculty. Faculty status by itself 
does not necessarily increase the efficacy 
of some collection development activities; 
faculty status does not affect how selectors 
maintain an awareness of what is happen-
ing within the university milieu. Rather, it 
is largely personal contacts with teaching 
faculty (not just departmental chairs or li-
aisons), graduate students, and depart-
mental secretaries that is believed to be at 
the heart of effective communication. 
These informal contacts can provide the
foundation for the development of formal channels of communication.
Selectors and bibliographers must therefore be given the opportunity to interact on an informal basis with faculty. They must be permitted to attend—at no charge and during work hours—classes, seminars, workshops, and field trips in the teaching departments. Attending faculty committee meetings should become a part of the selectors' normal workload. They should also be able to do online computer searches and library instruction in their areas of subject responsibility. Professional leave for attending subject-oriented professional meetings of groups such as Modern Language Association, Geological Society of America, and American Chemical Society—not just ALA and SLA—should be given freely. Educating the faculty about the library can be accomplished partly by hiring selectors with a knowledge of, or a genuine interest in, their selection areas. Librarians should be regarded as equals or partners in the overall educational process. With informal channels of communication firmly in place, the library, down to the selector level, can be formally and rightfully involved in planning for curriculum change.

APPENDIX A: SURVEY ON SOURCES OF INFORMATION FOR BIBLIOGRAPHER/SELECTOR AWARENESS OF CURRICULUM CHANGE

Question 1: Does your library have a current (revised within the last five years) collection development policy?
30 (38.0%) Yes
22 (27.8%) No
27 (34.2%) Yes, for some parts of the collection
If yes, is it updated on a regular basis (at least every five years)?
27 (44.3%) Yes
13 (21.3%) No
21 (34.4%) Yes, for some parts of the collection

Question 2: Does the library have representation on the university curriculum committee, i.e., committee charged with discussing curriculum concerns such as degree requirements, course changes, etc.?
23 (29.5%) Yes, always
13 (16.7%) Occasionally
6 (7.7%) Seldom
27 (34.6%) Never
9 (11.5%) Not applicable. Please explain: ____________________________

Question 3: Do librarians at your institution have faculty status?
39 (49.4%) Yes
6 (7.6%) Academic Status
34 (43.0%) No
If yes, do you feel that there has been a change in bibliographer/selector awareness of course changes (additions/deletions/modifications) due to obtaining faculty status?
7 (20.6%) Yes, greater awareness
1 (2.9%) Yes, less awareness
26 (76.5%) No, no change due to faculty status

Question 4: Do bibliographers/selectors have knowledge of proposed course changes in their area(s) of responsibility before they are implemented?
6 (7.9%) Yes, always
24 (31.6%) Yes, often
37 (48.7%) Sometimes
9 (11.8%) Rarely
0 (0.0%) Never

Question 5: Are selectors at your institution allowed an opportunity to officially comment on how proposed course/program changes will affect materials selected?
33 (44.0%) Yes
37 (49.3%) No
5 (6.7%) Seldom
If yes, what form does this take?
If no, do you think they would benefit from this opportunity?

23 (52.3%) Yes
1 (2.2%) No
19 (43.2%) Only for major program changes
1 (2.2%) Other. Please explain: __________________________

Also, if no, do you think the university would benefit from the librarians having this opportunity?

24 (60.0%) Yes
1 (2.5%) No
14 (35.0%) Only for major program changes
1 (2.5%) Other. Please explain: __________________________

Question 6: Potentially how useful to the bibliographers/selectors are each of the following methods for learning about courses/programs offered at your university?
