PRODUCTION NOTE

University of Illinois at Urbana-Champaign Library
AN EXTENSION OF THE
DEWEY DECIMAL SYSTEM OF CLASSIFICATION
APPLIED TO
ARCHITECTURE AND BUILDING

by

N. CLIFFORD RICKER, D. ARCH., PROFESSOR OF ARCHITECTURE

INTRODUCTION

The Dewey Decimal Classification was invented and introduced by Dr. Melvil Dewey, also the originator of the schools for the training of librarians and their assistants. Several successive and much extended editions of his book have appeared, and the system has been found so convenient for practical uses that it is now more commonly employed in America and Europe than are any competing systems of arrangement.

All science, arts, literature, and tangible objects to be classified are distributed into ten classes or centuries:

- 0 to 100 General Works
- 100 to 200 Philosophy
- 200 to 300 Religion
- 300 to 400 Sociology
- 400 to 500 Philology
- 500 to 600 Natural Science
- 600 to 700 Useful Arts
- 700 to 800 Fine Arts
- 800 to 900 Literature
- 900 to 1000 History
Each one of these primary classes or centuries is next divided into ten secondary divisions or decades, like that for the Fine Arts:

700 Fine Arts
710 Landscape Architecture
720 Architecture
730 Sculpture
740 Drawing
750 Painting
760 Engraving
770 Photography
780 Music
790 Amusements

Each secondary class or decade is further divided into ten subdivisions or units, for example, like Architecture:

720 Architecture
721 Construction
722 Ancient
723 Mediaeval
724 Modern
725 Public
726 Religious
727 Educational
728 Residence
729 Design

In this manner are obtained 1000 unit divisions, which form a system usually found sufficient for a small library, a collection of general memoranda, or a series of notes and clippings of moderate extent. But a specialist requires a much more extended subdivision of perhaps only a few of these units comprising the topics in which he is chiefly interested. This introduces a very useful property of the decimal system, namely, that it may be almost infinitely extended in any part by the subdivision of certain units without affecting others or requiring any rearrangement of the general system.

First subdivide into tenths of the unit, like Modern Architecture, for example:

724. Modern Architecture
  .1 Renaissance
If one is particularly interested in the comparative study of the various types of the Renaissance style found in different countries, it will be convenient to subdivide 724.1 into hundredths, for example:

<table>
<thead>
<tr>
<th>724.1</th>
<th>Renaissance</th>
</tr>
</thead>
<tbody>
<tr>
<td>.11</td>
<td>Scotland</td>
</tr>
<tr>
<td>.12</td>
<td>England</td>
</tr>
<tr>
<td>.13</td>
<td>Germany</td>
</tr>
<tr>
<td>.14</td>
<td>France</td>
</tr>
<tr>
<td>.15</td>
<td>Italy</td>
</tr>
<tr>
<td>.16</td>
<td>Spain</td>
</tr>
<tr>
<td>.17</td>
<td>Russia</td>
</tr>
<tr>
<td>.18</td>
<td>Scandinavia</td>
</tr>
<tr>
<td>.19</td>
<td>Minor countries</td>
</tr>
</tbody>
</table>

A collection of notes and memoranda or photographs of Italian Renaissance buildings may then be so large, that it may profitably be subdivided into thousandths of the unit, as follows:

<table>
<thead>
<tr>
<th>724.15</th>
<th>Renaissance in Italy</th>
</tr>
</thead>
<tbody>
<tr>
<td>.151</td>
<td>Cinquecento</td>
</tr>
<tr>
<td>.152</td>
<td>High Renaissance</td>
</tr>
<tr>
<td>.153</td>
<td>Decadence</td>
</tr>
<tr>
<td>.154</td>
<td>Barocco</td>
</tr>
<tr>
<td>.155</td>
<td>Rococo</td>
</tr>
</tbody>
</table>

This would evidently arrange the materials most conveniently for a thorough study of the Italian Renaissance style in the order of its historical development. Therefore it is sufficiently evident that the decimal system of classification is capable of unlimited extension in any of its parts.
To apply the system to a collection of books, memoranda, or other materials, each particular item is simply numbered as indicated by the decimal classification. The collection is then arranged in numerical sequence, which places the objects classified in the same order. Persons not accustomed to the use of the decimal system of classification may at first find some difficulty in finding the proper number for a particular object or article. Therefore an alphabetically arranged index of the more important topics and their numbers has been added for their convenience.

It is believed that this extension of the Dewey Decimal Classification will be found useful and convenient by architects, builders, engineers and all other persons practically or theoretically concerned with Architecture and Building. Most of it has been in use for many years in the department of Architecture of this University for classifying extensive collections of lantern slides, photographs, a card index to architectural periodicals, and other materials for instruction. As meriting careful attention, the following points are suggested:

1. The suggested classification of all materials relating to each one of the architectural styles together, in order to bring them into the most compact and convenient arrangement for the student of the History of Architecture.

2. The careful separation of 690, Building Materials and Trades; 721, Architectural Construction; and 729, Architectural Forms and Design, making it now easy to assign any topic to its proper place.
# TABLE OF CLASS NUMBERS

690  **Building Materials Trades**  

See 721 for Architectural Construction.

Injuries to woods

- Wet rot
- Dry rot
- Ants
- Borers
- Fungus

Preservation of woods

- Painting
- Oiling
- Creosoting
- Zincking
- By corrosive sublimate
- By crude kerosene
- By fireproof paint
- By sulphate copper

Stone Material Protection

- Limestone
- Marble
- Gypsum
- Bedford; Oolite
- Granite
- Syenite
- Porphyry
- Sandstone, ordinary
- Sandstone, brown
- Sandstone, portage

Slate

- Serpentine
- Soapstone
- Talc
- Trap
- Basalt
- Tufa
- Travertine
- Peperino

Other building stones

Preservation

- By painting
- By oiling
- By paraffine
- By silicate of soda
- By glue and tannin
- By cement wash

722, 723, 724 History of Architecture
Classify modern American buildings of importance in the History of Architecture under 724; generally all other American buildings under 725 to 728 inclusive.
Modern foreign buildings are usually placed under 724, unless of special importance as examples of the class or purpose, when they are to be treated like American buildings.
**Classification of Historical Data**

The following subdivision is recommended for the convenient arrangement of all data particularly referring to the History of Architecture. It is readily applicable to each subordinate or general division under 722, 723 and 724, being simply annexed to the style numbers.
