ILLINOIS COUNTY INDEX TO ISWS PUBLICATIONS WITH SURFACE WATER AND GROUNDWATER DATA

Location of Counties in Illinois

Major Streams in Illinois

INTRODUCTION

In 1897 the Illinois State Water Survey issued its first publication, entitled *Chemical Survey of the Water Supplies of Illinois, Preliminary Report*. This report was designated Bulletin 1. In succeeding years the State Water Survey has issued reports in seven series: Bulletins, Reports of Investigation, Cooperative Reports, Circulars, Reprints, Contract Reports, and Miscellaneous Publications. Many of these publications provide data on the surface and groundwater resources of the State of Illinois.

It has been my purpose in creating this index to provide easy access to these data by county. I have examined each of the included reports to identify the counties from which data were taken or for which estimates were made concerning the water resources. The index characterizes each report as including information on *surface water availability*, *surface water quality*, *groundwater availability*, and *groundwater quality*, or a combination of these. The term availability has been used to mean the existence of a water supply and its extent. Water quality can be defined as the chemical, physical, and biological characteristics of water with respect to its suitability for a particular purpose.

A report was considered to pertain to a county if the water resource was located in the county (in the case of groundwater) or was located in or contiguous to the county (in the case of surface water). I have relied on broad guidelines for the inclusion of reports, choosing to include, for example, reports on water resources with ill-defined geographic boundaries if they provided even a small amount of information for a particular county. I have disregarded the fact of legal ownership in cases of surface water bordering several counties, but again have considered any contiguous body of water as pertaining to a county.

In addition to a section for each county of Illinois, there is a category of "All Counties." Reports listed there relate to all or nearly all counties of the state or are works of a more general nature on the water resources of Illinois.

This index is complete for reports published from 1897 through June 1981. The printed index has been generated from a computer file of data which will be updated as new reports are published in subsequent years. Supplements to the printed report will be issued as needed. Brief annotations as well as information concerning the availability of all State Water Survey publications can be found in the *Annotated List of Publications, 1895-1975*, by J. Loreena Ivens and P. Motherway (Champaign, IL: Illinois State Water Survey, 1975) and its supplements. Write to:

ACKNOWLEDGMENTS

This project was begun under the direction of Robert H. Harmeson, former Assistant Chief of the Water Survey, and was concluded under the general guidance of Stanley A. Changnon, Jr., Chief. Assistance was provided by Marvin Clevenger, Carl Lonnquist, and Robert Sinclair in the computer production of the report. John Stall generously provided technical advice. A special note of appreciation is extended to Beverly Jones and Stephen Dingier, who assisted in the proofreading of the report.
