Two Bottom Chords
Two Top Chords
Two Short Diagonals

Glue

* * Polywood fabricated with exterior-type glue is recommended for use in humid areas.

Cut Long Diagonal
Lay the other end of the long diagonal over the peak joint. Mark on the long diagonal the

Repeat procedure for the right long diagonal.

Order Material

Small Heel Gusset on Other Side

Long Diagonal

From the order schedule below, determine the size of pieces needed.

Design and Performance Data for 4/12 Nail-Glued Roof Truss

Structural Design Data
The practical methods of analysis are available in roof-reducing systems in the structural truss. These are not

spanning and in the moment of eccentric load. Hence, they appear to be satisfactory generally. The "w" sections are

designed based upon bolts and welds. These span calculations are based on the fact that the truss is a

combination of the load and deflection, and the load and deflection, and the load and deflection, and the load and deflection,
