A Collection Expansion: Evaluating a Collection 145 Years in the Making

The original collection is now held in a number of locations throughout the Library. The Library has also acquired new VODF volumes and old VODF volumes when these are open for digitization. (Figure 1)

Leveraged cataloging allows the Library to digitize and make available a large number of volumes, which can then be placed online for access to the public.

In 1954, the Library acquired additional volumes from the National Library of Medicine. These volumes were added to the existing collection, increasing the number of titles available to the public. (Figure 2)

In 1982, the Library acquired additional volumes from the National Library of Medicine. These volumes were added to the existing collection, increasing the number of titles available to the public. (Figure 3)

In 1994, the Library acquired additional volumes from the National Library of Medicine. These volumes were added to the existing collection, increasing the number of titles available to the public. (Figure 4)

In 2000, the Library acquired additional volumes from the National Library of Medicine. These volumes were added to the existing collection, increasing the number of titles available to the public. (Figure 5)

In 2010, the Library acquired additional volumes from the National Library of Medicine. These volumes were added to the existing collection, increasing the number of titles available to the public. (Figure 6)

In 2015, the Library acquired additional volumes from the National Library of Medicine. These volumes were added to the existing collection, increasing the number of titles available to the public. (Figure 7)

In 2020, the Library acquired additional volumes from the National Library of Medicine. These volumes were added to the existing collection, increasing the number of titles available to the public. (Figure 8)

The total number of titles in the collection is now over 2 million. These volumes are available to the public through the Library's online catalog. (Figure 9)
