INTRODUCTION

The St. Jacob Quadrangle is located in Madison and St. Clair Counties, Illinois. It is of particular interest for its geologic resources, including geological formations and their properties. This map provides a detailed view of the surface geology within the quadrangle, highlighting various geological units and their spatial distribution.

ACKNOWLEDGMENTS

This project was supported by grants from the Illinois State Geological Survey (ISGS) and the U.S. Geological Survey (USGS). Special thanks go to [list of acknowledgments, including individuals and institutions] for their contributions to this research.

REFERENCES

[Provide a list of references, formatted in an appropriate citation style, including authors, titles, and publication information.]

This map is intended for use by the public and professionals, and it is based on comprehensive geological investigations and data. It serves as a valuable resource for understanding the geology of the St. Jacob Quadrangle and its implications for various applications.
