Magnetic hyperfine coupling in $^1\Sigma$ molecules

The spin-spin coupling¹

$$E_{SS} = \mu_N^2 \sum_i g_i \sum_{j>i} g_j \frac{(\mathbf{I}_i \cdot \mathbf{I}_j) - 3(\mathbf{I}_i \cdot \mathbf{r}_{ij})(\mathbf{I}_j \cdot \mathbf{r}_{ij})/r_{ij}^2}{r_{ij}^3}$$

The spin-rotation coupling¹

$$E_{SR} = -\frac{e\mu_N}{c} \sum_i g_i \mathbf{I}_i \cdot \sum_{j \neq i} Z_j \frac{\mathbf{r}_{ji} \times (\mathbf{v}_j - \gamma_i \mathbf{v}_i)}{r_{ij}^3}$$

Rovibrational operators

$$\begin{aligned} O_{sr}(A_1) &= \frac{1}{3}(E^1 + E^2 + E^3), & O_{sr}^h(A_1) &= E^4 \\ O_{sr}(E_a) &= \frac{1}{3}(2E^1 - E^2 - E^3), & O_{sr}(E_b) &= \frac{1}{\sqrt{3}}(E^2 - E^3) \end{aligned}$$

Accounting for the torsion

For an n non-degenerate A_1 or A_2 level¹⁻³

$$O_{sr}(A_1) \text{ and } O_{sr}^h(A_1)$$

This leads to the hyperfine **spin-rotation** coupling Hamiltonian

$$H_{\text{Hfs}} = C_S^{sr} H_{sr}(A_1) + C_S^{sr,h} H_{sr}^h(A_1)$$

where

$$C_S^{sr} = \langle n | O_{sr}(A_1) | n \rangle \text{ and } C_S^{sr,h} = \langle n | O_{sr}^h(A_1) | n \rangle$$
