Technology and Management in Library and Information Services

The integration of technology into library operations has greatly changed the manner in which tasks are accomplished and by whom. Technology and Management in Library and Information Services focuses on the management of technology rather than the technology itself, since it is the manner in which new tools are used that will make the difference in contemporary libraries.

Concepts discussed include:

- effects of technology on the organization and management of the library
- effects on staff, services, and users
- online systems as a source of management information
- evaluating online systems in libraries
- management of electronic collections
- access and delivery options
- instruction and training
- library-vendor relationships
- libraries and the internet
- artificial intelligence, expert systems
- possible future trends

Orders must be prepaid to the 'University of Illinois.'
Major credit cards accepted.
