STUDIES OF 4-CHLORO-2-FLUOROANISOLE BY TWO-COLOR RESONANT TWO-PHOTON MASS-ANALYZED THRESHOLD IONIZATION SPECTROSCOPY

<u>PEI-YING WU</u>, WEN-BIH TZENG, Institute of Atomic and Molecular Sciences, Academia Sinica, Taipei, Taiwan.

We applied the two-color resonant two-photon mass analyzed threshold ionization technique to record the cation spectra of 4-chloro-2-fluoroanisole by ionizing via five intermediate vibronic levels. The excitation and adiabatic ionization energies were determined to be 35 227, and 67 218 cm⁻¹, respectively. Spectral analysis and theoretical calculation suggest that the geometry of the aromatic ring of the neutral species in the S₁ state is non-planar, but that of the cation in the D₀ state is planar.
