Metadata for You and Me: Current and Emerging Trends in Metadata and Content Sharing

Jenn Riley – Indiana University
Sarah L. Shreeves – University of Illinois at Urbana-Champaign

Digital Library Federation Fall Forum 2008
November 13, 2008
What is Metadata for You and Me?

Workshop on how to think about creating metadata that works outside of your local environment

Talk about OAI PMH but more than that AND more focused on metadata

Online (46%) and Onsite (54%) – 238 total participants
Type of Participant Organizations

- academic library: 66%
- special library: 9%
- museum: 8%
- consortium: 3%
- other: 3%
- state library: 3%
- public library: 3%
- public broadcasting: 3%
- consultant: 3%
- vendor: 1%
- archives: 1%
- visual resources: 1%
- consortia: 1%
Types of positions

• Metadata specialists
• ‘Traditional’ catalogers
• Programmers
• Educational technologists
• Web developers
• And others
I've decided that having a session on shareable metadata first for us novices was the perfect way to start our learning process. Now, as we learn about more specific metadata schema, we will always have in the forefront of our thinking the many important issues raised in this workshop -- "How helpful/logical will the metadata be to audiences and systems outside of our own local environment?"

- Participant in on-site course
What we learned

• Still new for a lot of organizations
• Common ground between different types of organizations
• Dublin Core misunderstood (but systems / DCMI hasn’t helped)
• Locked into turnkey systems that just simply don’t work the way the need to
  – Treat metadata as monolithic
  – Not standards driven
  – Sharing not a priority
Sharing is a moving target

• Technology is constantly shifting
• User expectations are evolving
• During the course of a two-year project, major events occur that present opportunities for introducing new content
Woman aircraft worker, Vega Aircraft Corporation, Burbank, Calif. Shown checking electrical assemblies (LOC)

I LOVE this fabric!
And by the way, the color's not surprising....Kodachrome's been around since the mid-30's. - Mreija
So what’s next?

- For our project
  - Record the full-day workshop and make screencasts available online
  - Hopefully publish a “lessons learned” article

- For metadata sharing
  - Need more examples of production-level sharing via multiple protocols
  - Institutions must continue to insist repository software makes it easy to share

- Expand into content sharing too
