

Network Security and the Science DMZ

Jim Basney and John Zage

This material is based upon work supported by the National Science Foundation under grant number 1547272. Any opinions, findings, and conclusions or recommendations expressed in this material are those of the authors and do not necessarily reflect the views of the National Science Foundation.

Outline

- Intro to Science DMZ
- Network Security Challenges for Science DMZ
- Network Intelligence Sharing for Science DMZ
- Hands-on with Science DMZ security

What is a network DMZ?

- A "demilitarized zone" or perimeter network that is exposed to the internet

By en>User:Pbroks13 -

The Science DMZ* in 1 Slide

Consists of **key components**, all required:

- “Friction free” network path
 - Highly capable network devices (wire-speed, deep queues)
 - Virtual circuit connectivity option
 - Security policy and enforcement specific to science workflows
 - Located at or near site perimeter if possible
- Dedicated, high-performance Data Transfer Nodes (DTNs)
 - Hardware, operating system, libraries all optimized for transfer
 - Includes optimized data transfer tools such as Globus Online and GridFTP
- Performance measurement/test node
 - perfSONAR
- Engagement with end users

Details at <http://fasterdata.es.net/science-dmz/>

Network Security Challenges for Science DMZ

- International research collaborations = external users
- Sharing BIG DATA - legitimate network requests can look like attacks
 - striped data transfers look like DoS attack
 - data replication to/from many sites
- Need to avoid the "firewall bottleneck"
- Operating an "open network"
 - University: Science DMZ is a dedicated network area
 - Supercomputer Center: most of the LAN is the Science DMZ
- Access to powerful services: remote job submission, large data transfer

Network Intelligence Sharing for Science DMZ

- Research collaborators use Science DMZs at multiple universities
 - Common threats to Science DMZs across many universities
- Share intelligence across Science DMZs to enhance threat detection
 - Threats seen in multiple location can provide deployments an edge
- Threat intelligence data can also be used for cyber security research
- Visibility into activity at the perimeter and provide the ability to act on it
 - Network monitoring equipment (i.e. taps, aggregators) in high throughput networks
- Result: Enhancing the security of the Science DMZ model
