

## HIGH RESOLUTION ANION PHOTOELECTRON SPECTRA OF $\text{NdO}^-$

MARK C BABIN, *Department of Chemistry, University of California - Berkeley, Berkeley, CA, USA*; MARTIN DeWITT, *Chemistry, University of California, Berkeley, Berkeley, CA, USA*; JESSALYN A. DeVINE, *Department of Chemistry, The University of California, Berkeley, CA, USA*; DAVID C McDONALD, *RVBXB/Plasma Chemistry Lab, Air Force Research Lab, Albuquerque, NM, USA*; NICHOLAS S. SHUMAN, ALBERT VIGGIANO, *Space Vehicles Directorate, Air Force Research Lab, Kirtland AFB, NM, USA*; LAN CHENG, *Department of Chemistry, Johns Hopkins University, Baltimore, MD, USA*; DANIEL NEUMARK, *Department of Chemistry, The University of California, Berkeley, CA, USA*.

High-resolution anion photoelectron spectra of cryogenically cooled  $\text{NdO}^-$  obtained using slow photoelectron velocity-map imaging (cryo-SEVI) are presented, providing insight into the vibronic structure of the corresponding neutral metal oxide.
